2015 IEBC Section 410, IBC Appendix E—Existing Buildings and Supplemental Provisions	451
Quiz	473
<b>Answer Keys</b>	477

# INTRODUCTION

This study companion provides practical learning assignments for independent study of the accessibility provisions contained in the 2015 *International Building Code*<sup>®</sup> (IBC<sup>®</sup>) and ICC A117.1-2009, Accessible and Usable Buildings and Facilities. The independent study format affords a method for the student to complete the program in an unregulated time period. Progressing through the workbook, the learner can measure his or her level of knowledge by using the exercises and quizzes provided for each study session.

The workbook is also valuable for instructor-led programs. In jurisdictional training sessions, community college classes, vocational training programs and other structured educational offerings, the study guide, IBC and ICC A117.1 can be the basis for classroom instruction.

All study sessions begin with a general learning objective specific to the session, the specific code/standard sections or chapter under consideration and a list of questions summarizing the key points of study. Each session addresses selected accessibility topics and includes IBC or ICC A117.1 text, a commentary on the provisions, illustrations representing the provisions under discussion and multiple choice questions that can be used to evaluate the student's knowledge. Before beginning the quizzes, the student should thoroughly review the IBC and ICC A117.1, focusing on the key points identified at the beginning of each study session.

The workbook is structured so that after every question the student has an opportunity to record his or her response and the corresponding reference. The correct answers are found in the back of the workbook in the answer key.

This study companion was originally developed by Doug Thornburg, Vice President, Education and Certification for the International Code Council. This latest edition was updated to the 2015 IBC and 2009 A117.1 standard by Jay Woodward, Senior Staff Architect at ICC.

The information presented in this publication is believed to be accurate; however, it is provided for informational purposes and is intended for use only as a guide. As there is a limited discussion of selected provisions, the IBC and ICC A117.1 should always be referenced for more complete information. In addition, the commentary set forth may not necessarily represent the views of any enforcing agency, as such agencies have the sole authority to render interpretations.

Questions or comments concerning this study companion are encouraged. Please direct your comments to ICC at [studycompanion@iccsafe.org](mailto:studycompanion@iccsafe.org).

## **About the International Code Council**

The International Code Council is a member-focused association. It is dedicated to developing model codes and standards used in the design, build and compliance process to construct safe, sustainable, affordable and resilient structures. Most U.S. communities and many global markets choose the International Codes. ICC Evaluation Service (ICC-ES) is the industry leader in performing technical evaluations for code compliance fostering safe and sustainable design and construction.
